

FLYING LESSONS for July 27, 2017

FLYING LESSONS uses recent mishap reports to consider what *might* have contributed to accidents, so you can make better decisions if you face similar circumstances. In almost all cases design characteristics of a specific airplane have little direct bearing on the possible causes of aircraft accidents—but knowing how your airplane's systems respond can make the difference as a scenario unfolds. So apply these FLYING LESSONS to the specific airplane you fly. Verify all technical information before applying it to your aircraft or operation, with manufacturers' data and recommendations taking precedence. **You are pilot in command, and are ultimately responsible for the decisions you make.**

FLYING LESSONS is an independent product of MASTERY FLIGHT TRAINING, INC. www.mastery-flight-training.com

Pursue **Mastery of Flight™**

This week's LESSONS:

I'm working at Oshkosh, so our LESSONS will have to wait until next week. If you're at AirVenture please stop by my presentation:

Stop Talking About Safety

Everyone thinks he/she is a "safe" pilot. But the mishap record shows not everyone avoids accidents. Safety is an *outcome*, not a strategy, the result attaining *mastery and command* of their aircraft. Here are some easy techniques you can use.

I'll be speaking the air conditioned **FAA Safety Center** (near the base of the control tower) on **Friday, July 28 at 2:30 pm**. I hope to see you there!

Meanwhile, if you're new to FLYING LESSONS (and even if you're not), the three most recent reports are linked from [the Mastery Flight Training website](http://www.mastery-flight-training.com). We'll get back to new FLYING LESSONS and also the [Beechcraft Weekly Accident Update](#) the first week of August.
